DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 5-7, 10, and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by White et al (6018241). White discloses the same invention as claimed: A sensor for sensing movement of a movable object, comprising: a) at least one magnet 34 attachable to the movable object, the magnet generating either a variable magnetic field or a variable polarity field, the magnet having a first end, a second end and a central portion; b) a first magnetic flux sensor 46 positioned near the central portion of the magnet, the first magnetic flux sensor generating an electrical signal that is indicative of a specific position of the movable object; and c) a second magnetic flux sensor 40 positioned near the first end of the magnet, the second magnetic flux sensor generating an electrical signal that is indicative of when the movable object has reached a pre-determined location; printed circuit board (see col.4, line 38); Hall 40, etc.; clutch pedals (col.3, lines 33-34); housing 82 or 76. Although White et al does not explicitly discloses "the first magnetic flux sensor generating an electrical signal that is indicative of a specific position of the movable object" and "the second magnetic flux sensor generating an electrical signal that is indicative of when the movable object has reached a pre-determined location," from the graphs of the two sensors, it would inherently

Art Unit: 2862

provide the first magnetic flux sensor generating of an electrical signal that is indicative of a specific position of the movable object (and/or an electrical signal that is indicative of when the movable object has reached a pre-determined location) and the second magnetic flux sensor generating an electrical signal that is indicative of when the movable object has reached a pre-determined location (and/or an electrical signal that is indicative of a specific position of the movable object). Although specific columns, figures, reference numerals, lines of the reference(s), etc. have been referred to, Applicant should consider the entire applied prior art reference(s).

Allowable Subject Matter

Claims 4, 8-9, 11 and 13-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 15-23 are allowed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bot LeDynh whose telephone number is 5712722231. The examiner can normally be reached on Maxiflex.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Lefkowitz can be reached on 5712722180. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
